

ICT, Labour Market Productivity, and Inequality: Evidence from Italy

Tito Boeri and Pietro Garibaldi

*(Bocconi University and
Fondazione Rodolfo Debenedetti)*

Museo Diocesano Catania, 15th June 2002

A new Demoskopea Survey

Population

Italian population aged 14 - 79 anni (47.400.000 individuals)

Sample size

1.005 valid cases

Sampling

Two-stage sampling: 1st household (random dialing), then respondent in the household

CATI Techniques

Information on...

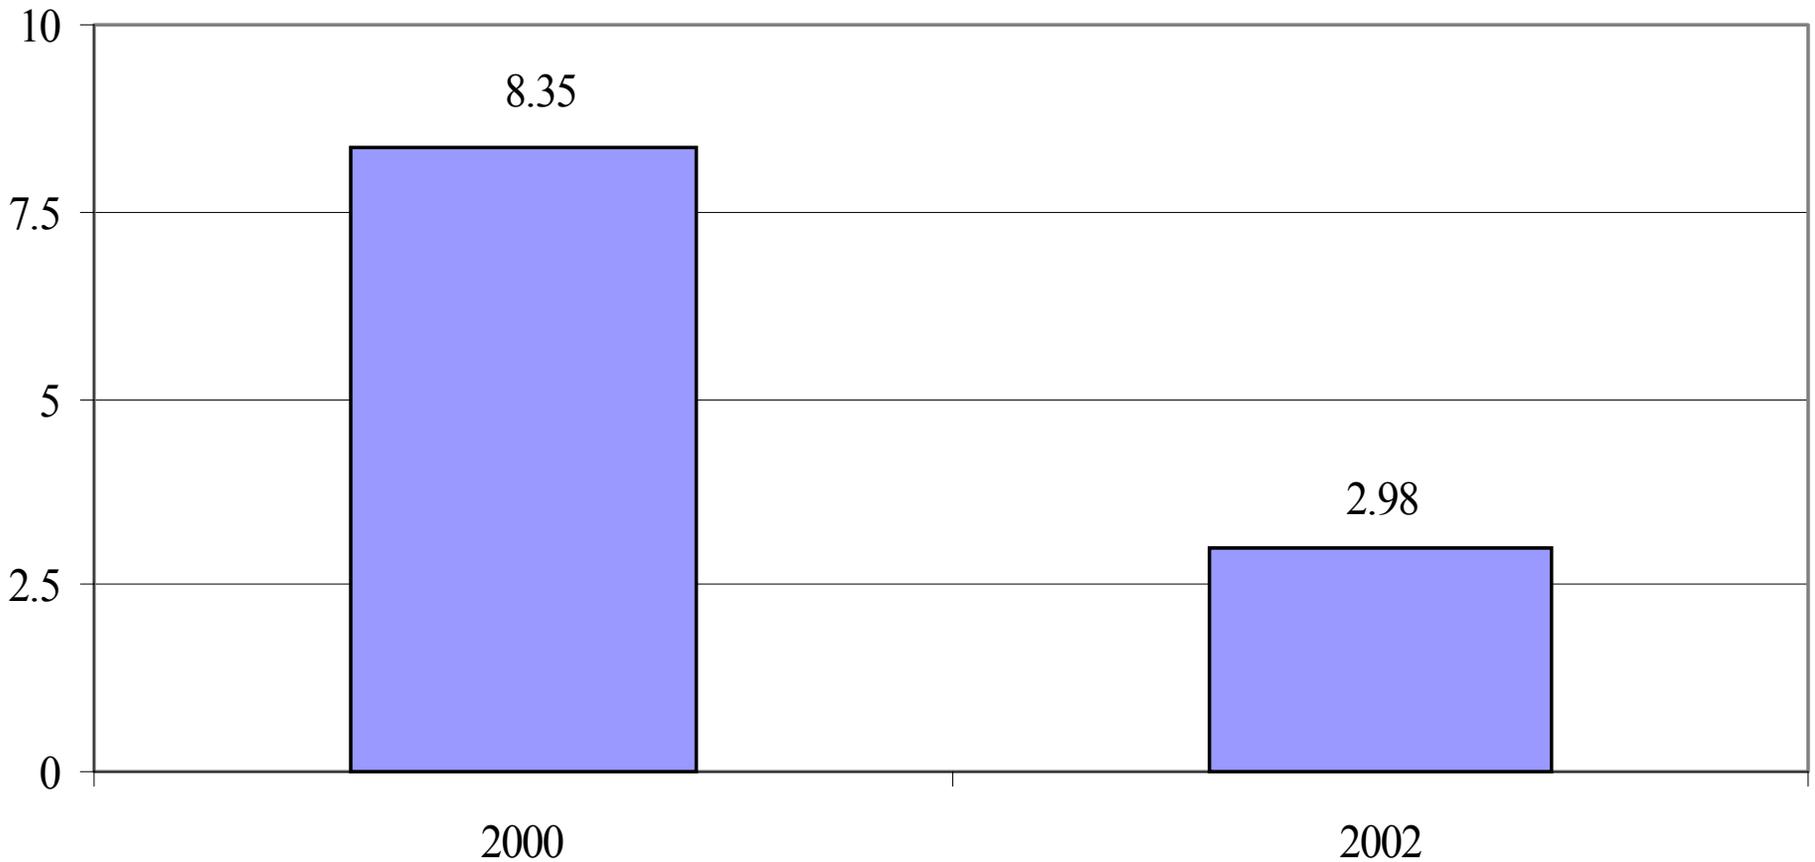

Use of Internet, willingness to distance working, Willingness to pay for computer literacy

Computer Literacy: different sources, same gap

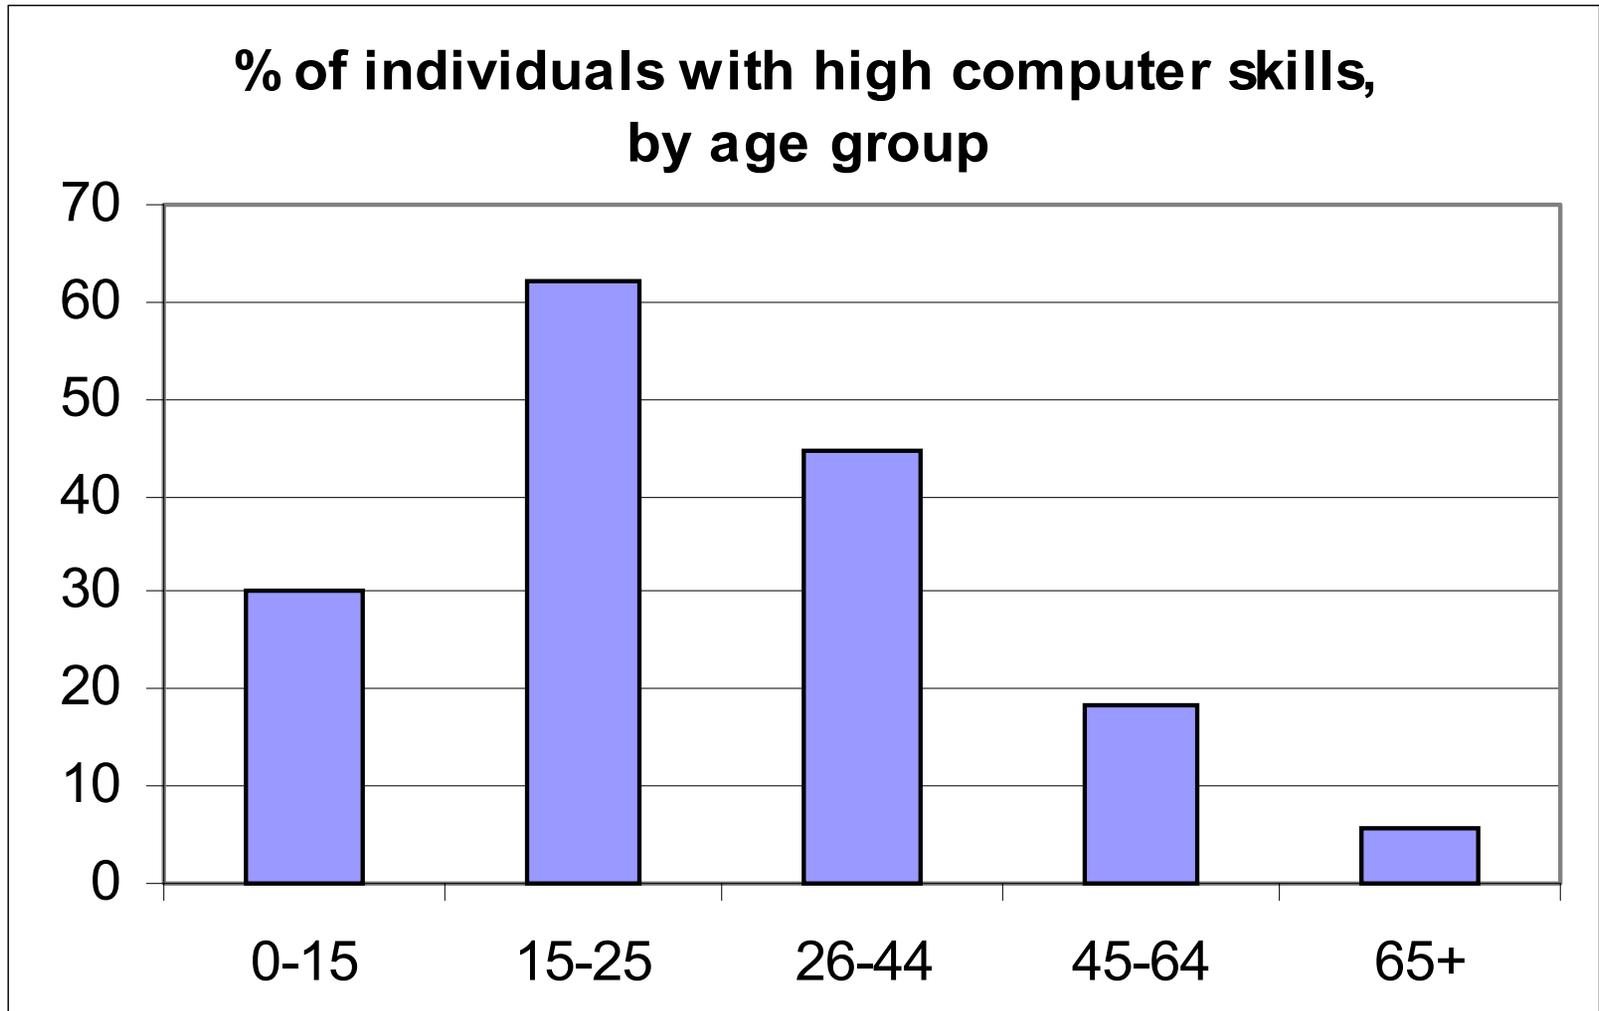

27%	% Europeans using Internet (OECD 2001)
24%	% Italians using Internet (OECD 2001)
37%	% Europeans using Internet (Eurobarometer 2002)
34%	% Italian using Internet (Demoskoopia 2002)
61%	% of Italian <i>families</i> using Internet (Bank of Italy, 2002)

A narrowing North-South divide?

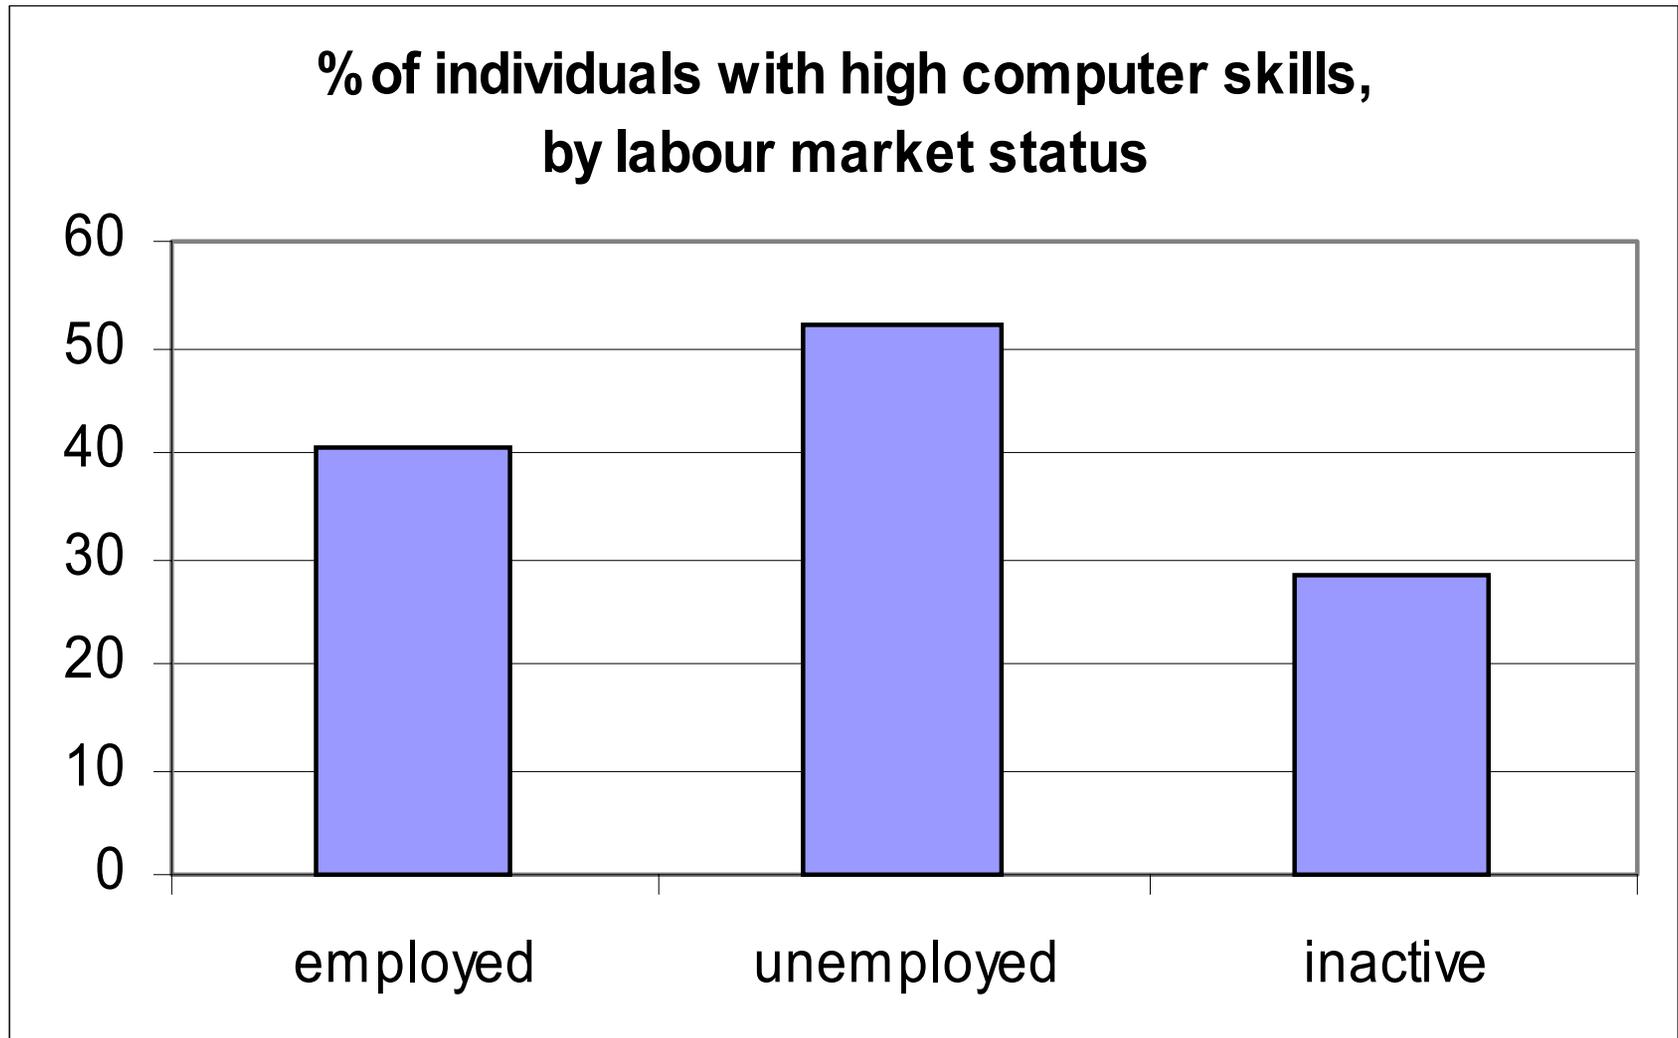

**North-South divide in the use of Internet and e-mail,
2000 and 2002**

A stable age divide...

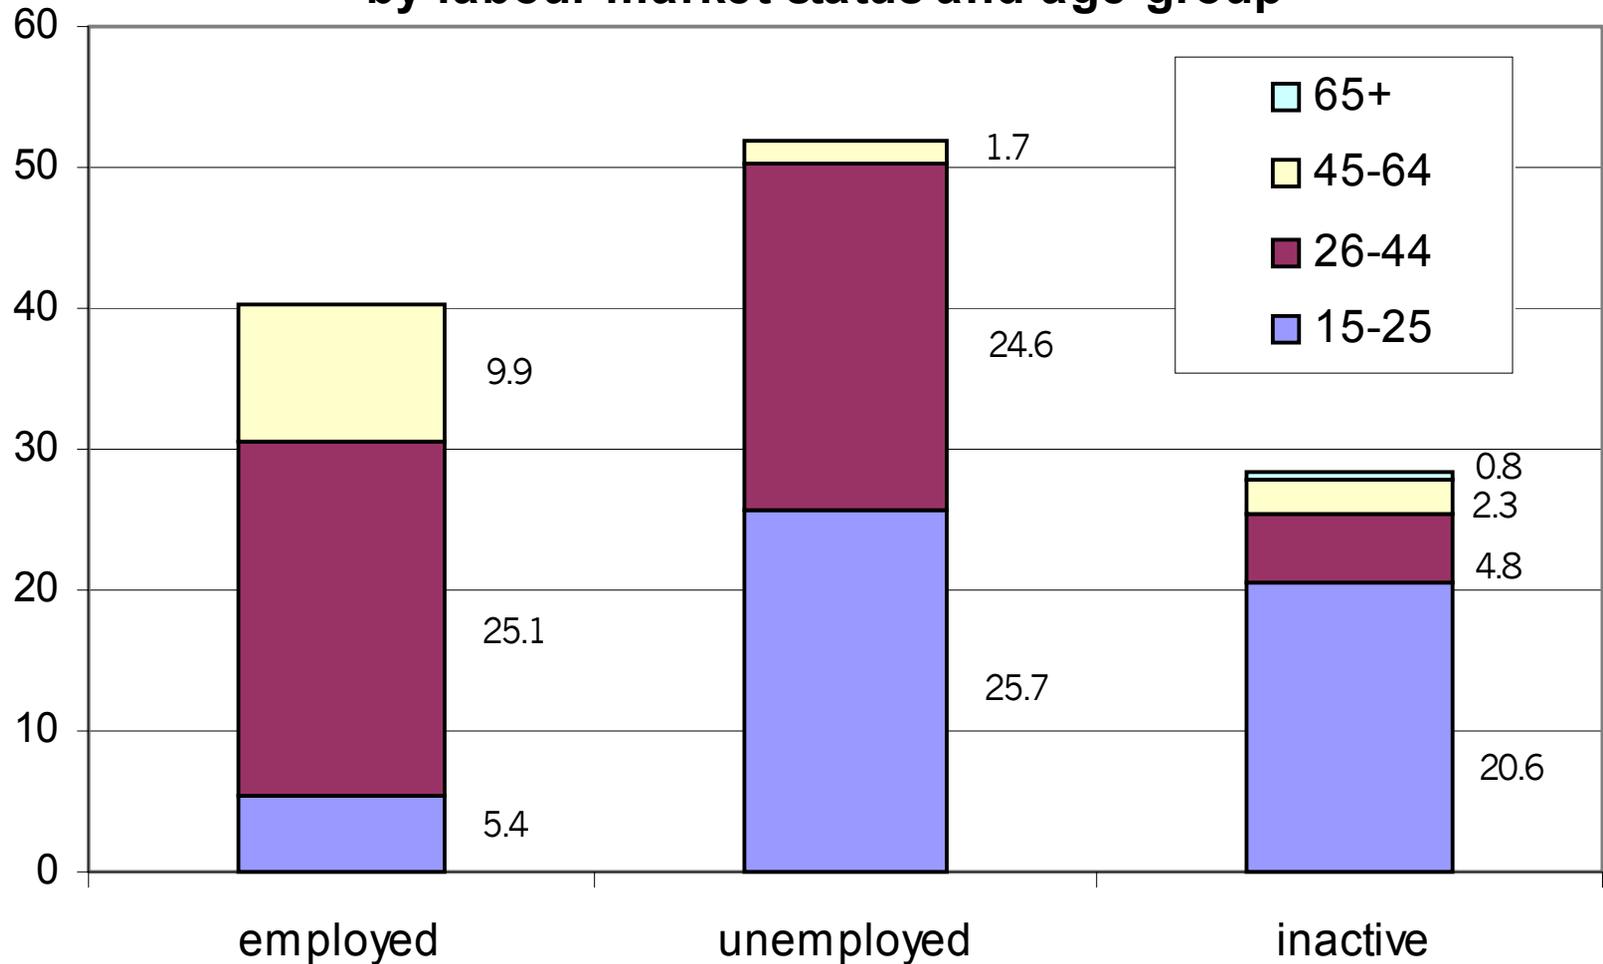

..... A surprising Labour Market Outcome?

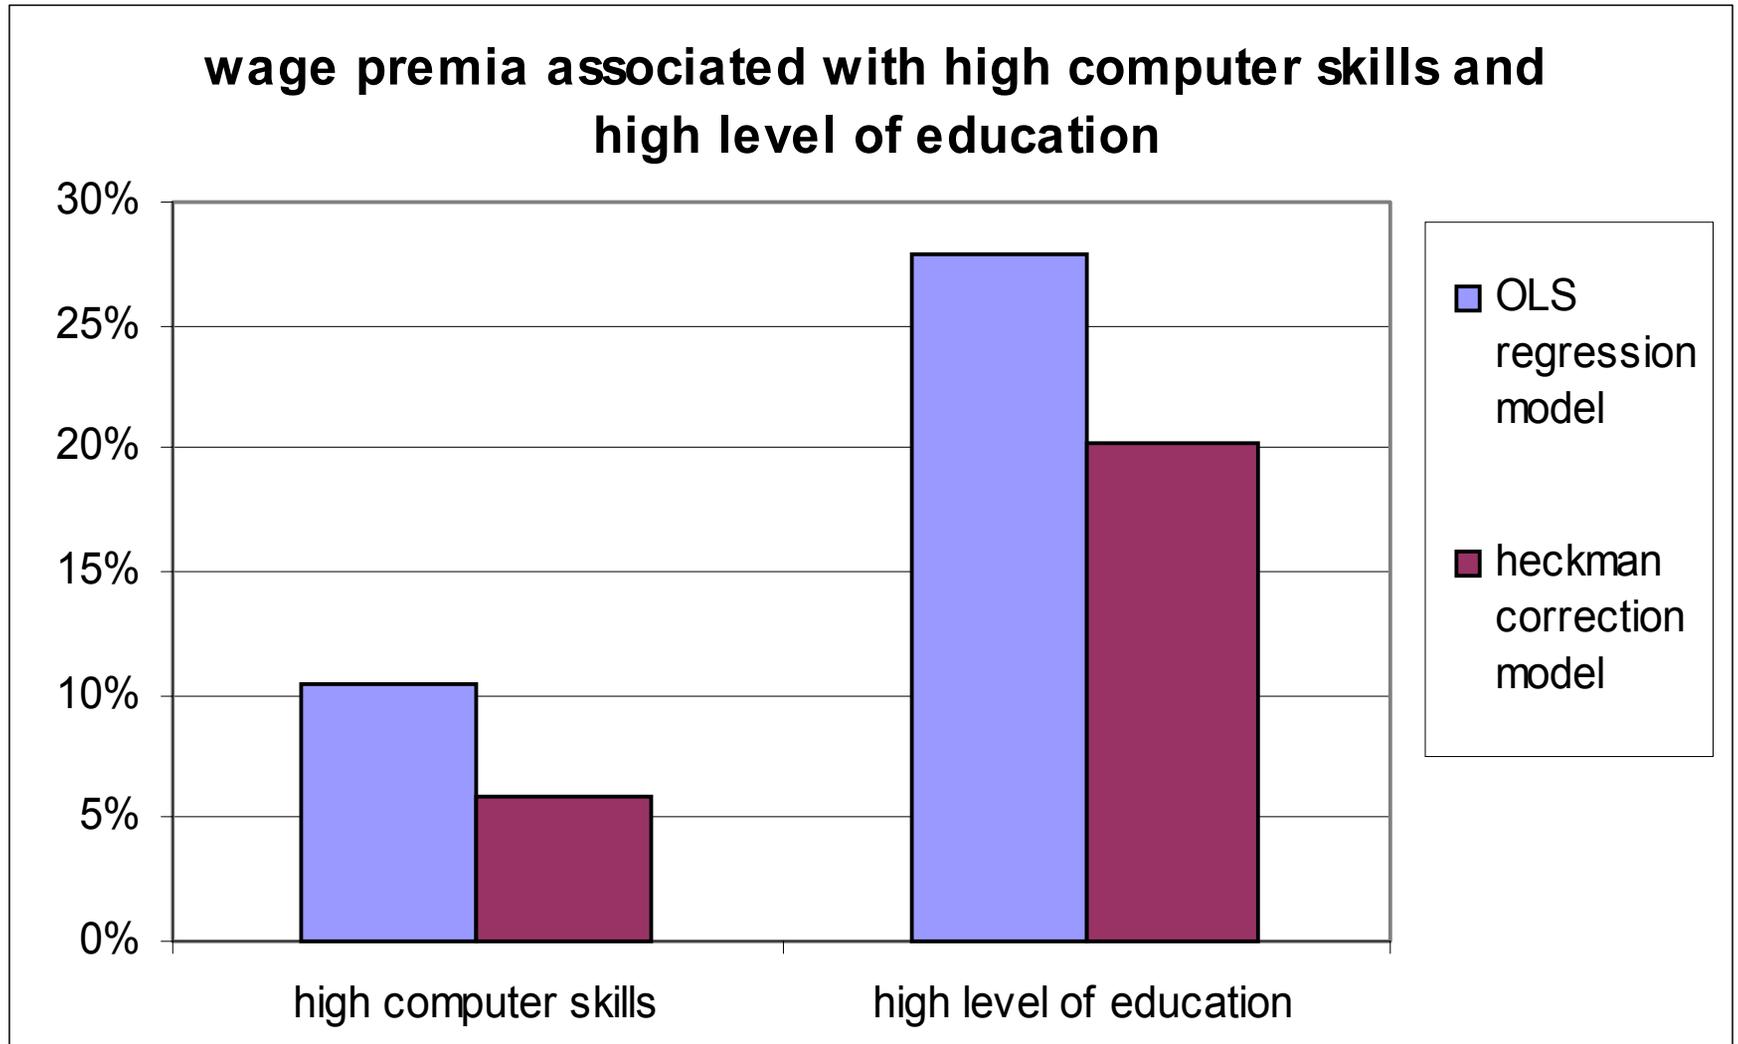

May be Not....

**% of individuals with high computer skills,
by labour market status and age group**

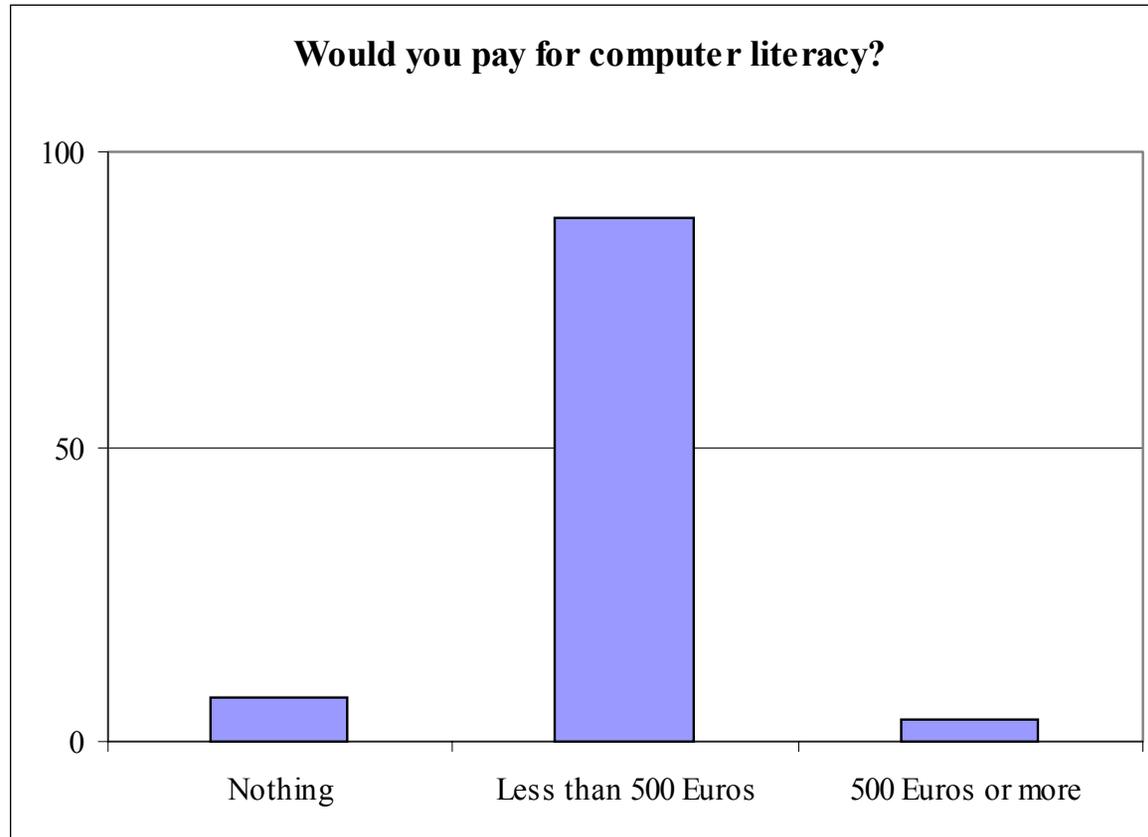

Computer Literacy: Does the Labour Market Pay for it?

Are Individual willing to Invest?

Yes, but at low (own) cost

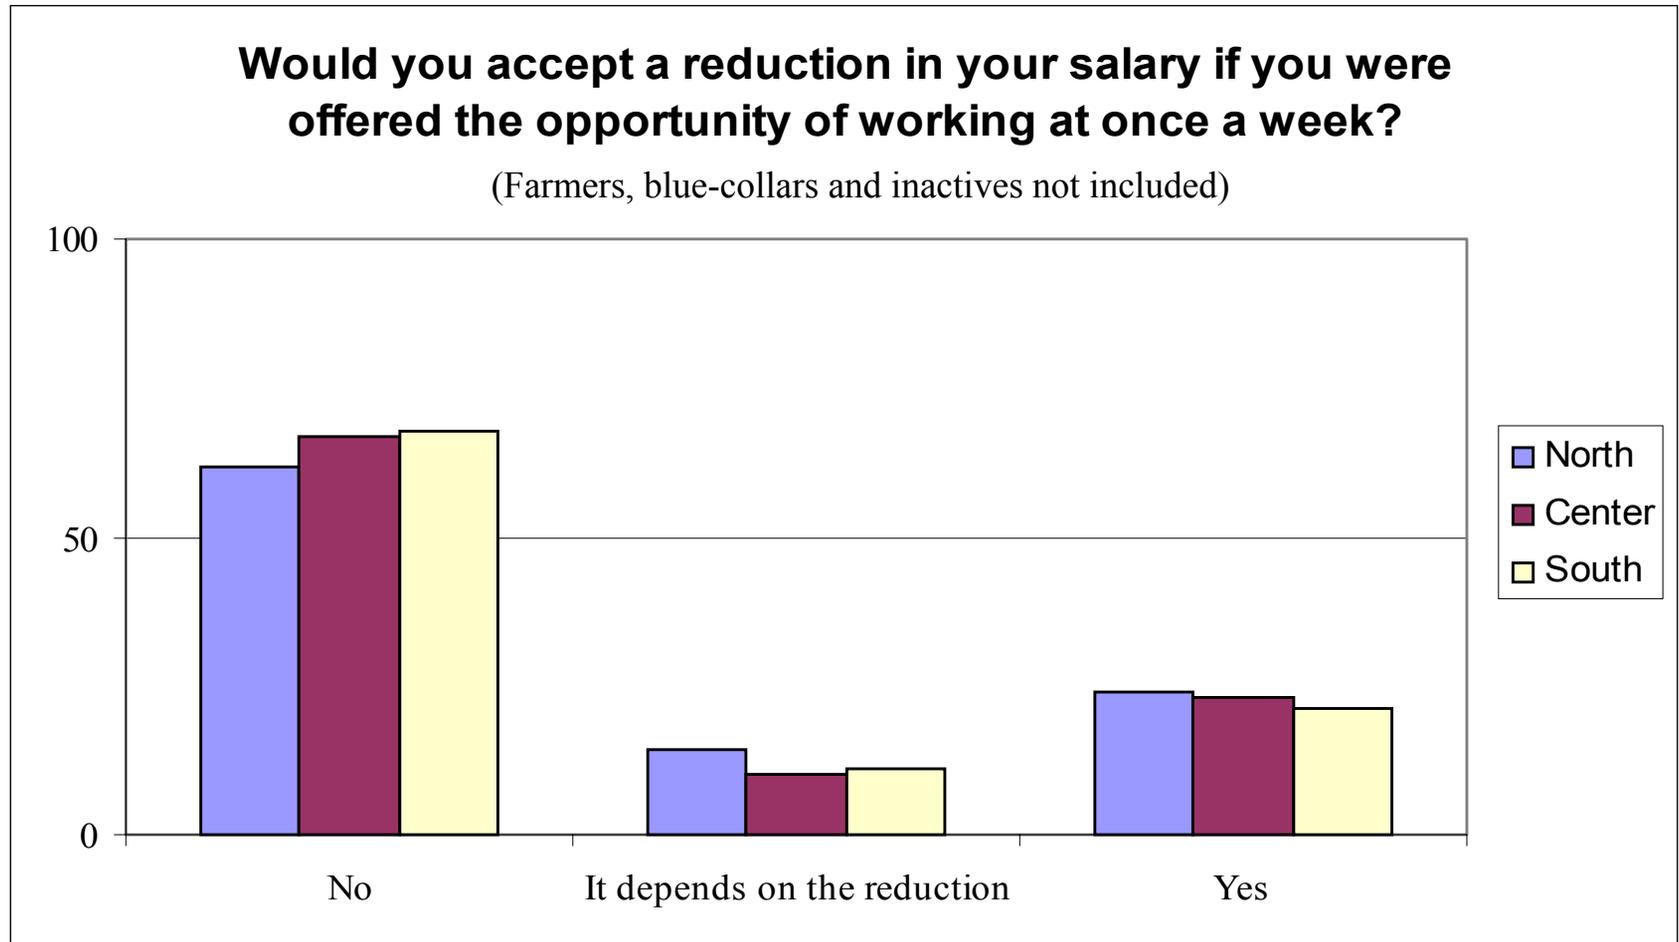

If expected returns are sizeable, why so little money to invest?

- Job finding probability is low and does not increase with computer literacy
- High Liquidity constraints
- Workers perceive that firms have incentive to sponsor general training with wage compression
- Wage premia will be dissipated by ongoing upskilling of the labour force

Digital Labour Supply

a substitute for regional labour mobility?

Back to the Future

- Morning Session: ICT related productivity differentials across the Ocean. How large? Are they narrowing down?
- Afternoon Session: Digital Inequality across consumers, producers and trading partners. Widening inequalities to be expected?
- Will we learn anything new?
